Bchamoun, Lebanon

EDUCATION

Lebanese American University, Beirut, Lebanon
BS in Computer Science

Graduation: June 2024

Lycée Français International Elite, Beirut, Lebanon
Lebanese Baccalaureate, TES

2019

PROJECTS

"Tumor Detector" Machine Learning, 2025

A solution using a custom trained AI model to read brain MRI scans and predict the tumor type (of 4 types).

- Code and ML training was made in the Google Colab environment.
- Used Python, Python libraries (TensorFlow, Keras, Matplotlib...), Dataset from "Kaggle"
- Solution's UI was made using HTML/CSS on VS Code.
- Flask was used to interact with the AI model

"Ya Zalame Drive!", 2025 (Available on Google Play Store)

An endless driving mobile game that lets the player drive the dangerous Lebanese roads while dodging obstacles such as cars and civilians.

- Developed using Unity (C#). Features: level transitions, car shop, ads implemented, animations...

"Watchable" Movie App, 2026 (Available on Google Play Store Soon)

Android app designed for moviegoers to view all new and old films/TV shows including their details.

- It's a React-Native app. Getting its data using an API call from "The Movie Database" (TMDB)
- Developed using Tailwind CSS, HTML, Expo Go, JavaScript and several npm packages.
- The user saves his own watch later list, watched list and ratings. All locally.
- Pages: Home (displaying a selection of new movies), Search (allowing the user to search for a certain movie/TV show by name), Saved (allows the user to save movies/shows as a "watch later" reminder), Watched (list of watched movies/shows by the user).

"FileFlow AI" RAG system, 2026

Q&A agent that retrieves data from files and answers user queries

- Let's you upload documents (PDFs, Word, PowerPoint, Excel) and ask natural-language questions about their content. An LLM agent searches, cross-references, and synthesizes answers with exact source citations, including the extracted text passage for each citation.
- Runs via Docker file
- Uses extensive Python libraries designed to orchestrate RAG pipelines
- Databases used: ChromaDB (vector database), SQLite (saves chat history + caches answers)
- LLMs used: OpenRouter API, all-MiniLM

N8N Projects, 2025 - 2026 (Automation projects)

- Ticketing System: Users send their issues via email to the technical team, or via custom form; an AI model reads the issue and gives it a class and priority tag, then notifies the appropriate support team.
- Gmail clean-up: Checks on your Gmail inbox and determines which emails are worth marking as read and which ones to keep unread, saving the user's time.
- Expense tracker: The user sends his recent expenses via Telegram bot by text, an AI agent adds the details in a personal google sheet, helping the user track his daily expenses.
- AI chatbot: A simple chat bot on telegram that imitates the famous butler **Alfred Pennyworth**. He can receive text or voice messages, answers via text for now.

WORK EXPERIENCE

Focus Far Digital Marketing & Advertising Middle East, Beirut, Lebanon

Summer 2020

Web Developer

- Learned PHP, backend, and frontend development.
- Created websites using WordPress, HTML, CSS, and JavaScript.

Webedia Arabia, Beirut, Lebanon

May 2023 - Oct 2023

AI implementation

- Content creation in Arabic and proposed improvements for enhanced performance.
- Researching emerging AI technology, frameworks and algorithms to identify potential applications within the digital media industry.
- Conducting training sessions to educate the team members about the benefits and functionalities of the AI- enhanced content creation process.
- Conducting experiments to assess the accuracy and efficiency of AI models for written content.

Baalbaki Chemical Industries (BCI), El-Hamra, Beirut

Jul 2023 – Oct 2023

IT intern

- Technical Support and IT Hardware Support.

Junior .Net Developer

Oct 2023 – Apr 2025

- Writing code using .NET framework (C#) that targets windows or web platforms.
- Design user interface for windows and web.
- Report designs.
- Perform needed support for end users.
- Perform testing tasks on various features and identify end user bugs.
- Gather requirements and report to the team in an understandable and structured way.
- ERP system administration.

Data Specialist

Apr 2025 - Now

- Cleaning and validating data
- Ensuring data accuracy and quality
- Assisting with data imports/exports
- Supporting data migrations

TECHNICAL SKILLS

- | | |
|--|---|
| • JavaScript (+ NodeJS and JQuery) | • Machine Learning (sklearn, pandas...) |
| • Web development (HTML/CSS) | • C, C# |
| • Mobile Development (Android studio in Java, Unity games, React Native) | • Python |
| • Game development (Unity, Roblox, GDevelop) | • SQL, MongoDB, Supabase |
| • Data analysis (Power BI certified) | • N8N (automation tool) |
| | • Docker |
| | • Claude Code |

LANGUAGES

Fluent in both English and Arabic. Intermediate in French.

INTERESTS

Football, gaming, drawing, and learning new programming languages, automation and AI.
